B. Tech. Scheme of Examination & Syllabus 2023-24

Electrical Engineering

SEMESTER V

Sr No	Course Category	Course Code	Course Title	Hours per Week			Credits	Maximum Marks		
				L	T	P		Continual Assessment	End Sem Examination	Total
1.	PCC	23EE501T	Power Electronics	4	1	-	5	30	70	100
2.	PCC	23EE501P	Power Electronics Lab	-	-	2	1	25	25	50
3.	PCC	23EE502P	Electrical Engineering Drawing & Simulation Lab	-	-	2	1	25	25	50
4.	PEC	23EE503T	Electrical Machine Design	3	1	-	4	30	70	100
5.	OE	23EE561O	Open Elective - II	3	-	-	3	30	70	100
6.	PCC	23EE505T	Professional Elective - I	4	-	-	4	30	70	100
7.	VSC	23EE504P	Technical Skill Development - II	-	-	4	2	50	-	50
8.	SEC	23EE541P	Career Development - V	-	-	2	1	50	-	50
Total				14	2	10	21	270	330	600
10	MDM	23EE531M	Multidisciplinary Minor-III (PS)	3	-	-	3	30	70	100
				18	2	10	24	300	400	700

Open Elective – II

23EE561O (i)	OE-II MATLAB Programming
23EE561O (ii)	OE-II Utilization of Electrical Energy

Professional Elective - I

23EE505T(i)	PE-I Advanced Power System
23EE505T(ii)	PE-I Linear Electronics Circuit
23EE505T(iii)	PE-I Signals & Systems
23EE505T(iv)	PE-I Electrical Machines-II
23EE505T(v)	PE-I Electric Vehicle Architecture
23EE505T(vi)	PE-I PLC & Industrial Automation

		June 2025	1.0	Applicable for 2025-26

B. Tech. Scheme of Examination & Syllabus 2024-25

ELECTRICAL ENGINEERING

FIFTH SEMESTER

Course Code	Course Name	Th	Tu	Pr	Credits	Evaluation		
						CA	ESE	Total
23EE501T	Power Electronics	4	1	-	5	30	70	100

Course Objectives	Course Outcomes
<ul style="list-style-type: none"> To introduce students, the basic theory of power semiconductor devices and their practical application in power electronics To familiarize the operation principle of AC-DC, DC-DC, DC-AC conversion circuits and their applications To provide the basis for further study of power electronics circuits and systems. 	Students will be able to <ul style="list-style-type: none"> Interpret operation of SCR and its characteristics Interpret principle of switching circuits, AC regulators and its applications. Analyze and design 1-phase and 3-phase Line commutated converters Circuit. Describe operation of basic inverter circuits. Analyze single phase and three phase bridge type inverter circuits, its output voltage control, PWM techniques. Analyze, design DC/DC converter circuits.

Unit I	[15Hrs]
SCR and Its characteristics: V-I, turn on & turn off characteristics, rating, gate characteristics, over voltage and over current protection, snubber circuit design.	
Commutation techniques of SCR: Natural commutation and forced commutation methods.(numerical on class B commutation)	
Unit II	[10Hrs]
Static controllable switches: Characteristics & working of MOSFET, Gate turn off thyristor and Insulated gate bipolar transistor, TRIAC, UJT, AC regulator and working principle of UJT as relaxation oscillator.	
Unit III	[15Hrs]
Line commutated converters:	
Single Phase line commutated converters: Working of single pulse converter, two pulse (mid-point & bridge) converter, effect of source inductance on 1-phase bridge converter, effect of freewheeling diode, single phase semi converter.	
Three phase line commutated converters: Working of three pulse converter and six pulse bridge converter, effect of freewheeling diode.	
Unit IV	[10Hrs]
Inverter: Working of basic series inverter, modified series inverter, bridge inverter, three phase inverter in 120° & 180° Modes, output voltage control, harmonic reduction by pulse width modulation techniques.	
Unit V	[10Hrs]
Chopper: Principles of step down chopper, step up chopper, impulse commutated chopper, multi-phase chopper, jones chopper.	
Cycloconverters : Working of single phase midpoint cycloconverter, single phase bridge type cycloconverter

23EE501P	Power Electronics Lab	-	-	2	1	25	25	50

Course Objectives	Course Outcomes
<ul style="list-style-type: none">To introduce students to understand construction, operation and various characteristics of SCR.To familiarize students to the different types of power semiconductor devices and their switching Operation, characteristics and performance parameters.To understand basic operation of AC to DC conversion system.To understand operation and application of DC to AC power conversion system with harmonic reduction methods.Operation, switching, techniques and basics topologies of DC-DC switching	<ul style="list-style-type: none">To obtain and analyze the characteristics of power semiconductor devices to plot the characteristics and present the results with findings.To observe and analyze the switching circuits, AC regulators and its applications.To demonstrate the working of controlled AC to DC converters with various types of loads and verify the characteristic equations. Develop ability to modify the circuit conditions according to the application requirements.To demonstrate the working of controlled DC to AC converters with various types of loads and verify the characteristic equations. Develop ability to modify the circuit conditions according to the application requirements.To demonstrate the working of controlled DC to DC and AC to AC converters with various types of loads and verify the characteristic equations. Develop ability to modify the circuit conditions according to the application requirements.

Experiment No.	Title of the Experiment
1	To Study V-I Characteristics of SCR and Measure Latching and Holding Currents.
2	To Plot waveform for AC Phase Control using DIAC-TRIAC.
3	To Determine Intrinsic Stand-off ratio of UJT and study UJT as Relaxation Oscillator.
4	Single Phase Half-controlled Converter with R & RL load.
5	Single Phase Fully Controlled Bridge Converter with R & RL loads.
6	Single-Phase Cycloconverter with R& RL loads.
7	Forced Commutation Circuits (Class A, Class B, Class C, Class D, Class E and Class F).
8	Single Phase Series Inverter with R & RL Loads.
9	To Plot Output Waveform of Jones Chopper.
10	Simulation of Single Phase Converter.

ELECTRICAL ENGINEERING

FIFTH SEMESTER

Course Code	Course Name	Th	Tu	Pr	Credits	Evaluation		
						CA	ESE	Total
23EE503T	Electrical Machine Design	3	1	-	4	30	70	100

Course Objectives	Course Outcomes
<p>This course is intended</p> <ul style="list-style-type: none">To study the basic concepts and applications of Electrical Machine Design.To design the main dimensions of Electrical Machines and study the effect of design on Electrical machines' performance characteristics.	<p>Students will be able to</p> <ul style="list-style-type: none">Design the overall dimensions of 1- phase and 3-phase core type transformer.Estimate the performance characteristics of the transformer as per specified design requirements and constraints.Design the overall dimensions of stator of 3 phase Induction MotorDesign the overall dimensions of rotor of 3 phase squirrel cage Induction MotorDesign the overall dimensions of alternator.

Unit I	[10Hrs]
Design of 1-phase and 3-phase core type transformer: - Classification of transformers based on construction and service conditions, Output equation, overall dimensions of 1-phase and 3-phase core type transformer, need of stepped core cross-section, selection of flux density and current density.	
Unit II	[10Hrs]
Performance characteristics of Transformer: - Calculations of per unit leakage reactance, regulation and No-load current for 1-phase and 3-phase core type transformer (Derivation of leakage reactance is not expected)	
Unit III	[9Hrs]
Stator Design of 3-phase Induction Motor: - Output equation of 3-phase Induction motor, selection of specific magnetic loading & specific electric loading, Selection of number and type of stator slots, overall dimensions of the stator core.	
Unit IV	[9Hrs]
Rotor Design of 3-phase Induction Motor: - Classification of 3-phase Induction motor based on rotor construction, selection of length of air gap and rotor slots, calculations of overall dimension and rotor speed of 3-phase squirrel cage rotor of 3-phase Induction motor.	
Unit V	[7Hrs]
Design of 3-phase alternator: - Classification of the alternators, peripheral speed and runaway speed, pitch factor and distribution factor . overall dimensions of 3 phase alternator, Calculations of the volume of coolant required per sec for the cooling of the alternator. Advantages of Hydrogen Cooling.

Course Code	Course Name	Th	Tu	Pr	Credits	Evaluation		
						CA	ESE	Total
23EE505T(v)	PE-I Electric Vehicle Architecture	4	-	-	4	30	70	100

Course Objectives	Course Outcomes
<ul style="list-style-type: none"> The course will enable students to compare and analyze different types of EVs. The course will enable students to evaluate the impact of various parameters on the performance of EVs. 	<p>Students will be able to</p> <ul style="list-style-type: none"> Quantify economic and environmental impact of EVs compared to IC engines. Analyze the mathematical models of EVs and justify impact of various parameters Compare various types of EV propulsion drive motors and be able to choose best for given application Enlist various types of EV storage systems and analyze characteristics Analyze various Power electronic circuit topologies for EVs

Unit I	[12Hrs]
Introduction: History of EVs – Economic and Environmental impact; Architecture of EV. Basics of vehicle performance, vehicle power source characterization, transmission characteristics. Electric Drivetrains- Basic concept of electric traction, introduction to various electric drive-train topologies.	
Unit II	[12Hrs]
Electric Vehicle Modelling: Consideration of Rolling Resistance – Transmission Efficiency – Consideration of Vehicle Mass – Tractive Effort – Modelling Vehicle Acceleration – Modelling Electric Vehicle Range -Aerodynamic Considerations –EV Motor Sizing	
Unit III	[14Hrs]
Electric Propulsion: Introduction to electric components used in electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives	
Unit IV	[12Hrs]
Energy Storage: Introduction to Energy Storage Requirements in Electric Vehicles, Battery based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.	
Unit V	[10Hrs]
Power Converters: DC-DC converters for EVs, Buck and Buck-Boost Converters, Multi-quadrant DC-DC converters, DC-DC converter applications, DC-AC converters for EVs, Three-phase DC-AC converters, Voltage control of DC-AC inverters using PWM

ELECTRICAL ENGINEERING

FIFTH SEMESTER

Course Code	Course Name	Th	Tu	Pr	Credits	Evaluation		
						CA	ESE	Total
23EE5610(ii)	OE-II Utilization of Electrical Energy	3	-	-	3	30	70	100

Course Objectives	Course Outcomes
<p>This course is intended to</p> <ol style="list-style-type: none"> Understand the concept of various Heating, Welding methodologies, Illumination methods and traction supply system. Appreciative of the concepts of Electrolysis processes, DG system 	<p>Students will be able to</p> <ul style="list-style-type: none"> Understand use of electric energy for industrial heating. Study the use of electrical energy in electric welding Learn basics of Illumination and design of lighting schemes for Various applications Understand pumps and DG systems and evaluate their performance. Understand Electric Traction system with its power supply structure.

Unit I	[08Hrs]
<p>Electric Heating: Types and methods of electrical heating, advantages of electrically produced heat, types & application of electric heating equipment, transfer of heat. Resistance Ovens: General constructions, design of heating elements, efficiency & losses, radiant heating. Induction heating: Core type & core less induction furnace & application Dielectric heating: Principle and application. Arc furnace: Direct & indirect arc furnace, power supply, characteristics & control.</p>	
Unit II	[10Hrs]
<p>Electric Welding: Importance, Advantages & Disadvantages of welding, classification of welding processes. Resistance welding, Butt welding, Spot welding, Seam welding, Electric arc welding, ultrasonic welding, laser beam welding.</p>	
Unit III	[10Hrs]
<p>Illumination: Nature of light, terms used in illumination, solid angle, laws of illumination, Colour Rendering Index(CRI), Design of illumination systems, indoor lighting systems, factory lighting, outdoor lighting design, floodlighting, street lighting, energy saving in lighting systems</p>	
Unit IV	[10Hrs]
<p>Pumps:- Pump types, system characteristics. Pump curves, factors affecting pump performance, efficient pumping system operation, energy conservation opportunities in pumping system.</p> <p>Diesel Generating Systems: Introduction, selection and installation factors, operational factors, energy performance assessment in DG sets, energy saving measures for DG sets</p>	
Unit V	[08Hrs]
<p>Electric Traction: Traction system, requirement of an ideal traction system, different systems for traction, system of railway electrification, comparison between AC and DC systems, power supply for electric traction system, overhead equipment (collector gear for overhead equipment, conductor-rail equipment), Speed- Time curve for train movement, crest speed, average speed and schedule speed, simplified speed-time curve</p>

FIFTH SEMESTER

Course Code	Course Name	Th	Tu	Pr	Credits	Evaluation		
						CA	ESE	Total
23EE531M	MDM-III Electrical Power System	3	-	-	3	30	70	100

Course Objectives	Course Outcomes
<p>Students will develop the ability to:</p> <ul style="list-style-type: none"> model & represent the power system components, represent & calculate the transmission line parameters. 	<p>Students will be able to:</p> <ol style="list-style-type: none"> 1. Explain the generation, transmission, and distribution of power. 2. Calculate transmission line parameters of a power system. 3. Classify various distribution schemes, LT & HT cables. 4. Evaluate performance of transmission lines by interpretation of equations and analytical solutions in system design. 5. Describe basic concepts of Insulators.

Unit I	[9Hrs]
Structure of electrical power systems: - Brief exposure of generation, transmission & distribution aspects; Concept of real, reactive, and complex power; Power Transfer in AC circuits and Reactive Power. Load and their characteristics; Voltage & Frequency dependence of loads.	
Unit II	[9Hrs]
Representation of power system components, Inductance & Capacitance of transmission lines.	
Unit III	[9Hrs]
Elementary distribution schemes & Cables: - Feeders and Distributors; LT & HT cables.	
Unit IV	[9Hrs]
Performance of transmission lines: - Voltage regulation & efficiency of short and medium transmission line using simple series equivalent representation, T- representation, pi- representation.	
Unit V	[9Hrs]
Insulators: - Concept of insulator, types of insulators, String efficiency.
